

Coronavirus Information

EPIDEMIC VIGILANCE PLAN

In the context of the coronavirus (Covid-19) epidemic, the Korian Group has activated its Epidemic Vigilance Plan as of 25 February 2020 for all of its facilities in Europe, completing the system already in place.

In this respect, the following measures are applicable:

- A poster of the epidemic risk in each facility and the behaviours to adopt
- Any outside person that visits the facility must systematically sign the register
- Deployment of reinforced preventive measures (systematic hand washing especially at the entrance of the establishments and/or disinfection with hydro-alcoholic solutions, reinforced bio-cleaning, etc.).
- Immediate reporting of any infectious symptoms affecting a patient or employee for immediate analysis and implementation of appropriate protective measures, if necessary.

Outsiders are also advised not to visit the facility in case of infectious symptoms or, as a precaution, if they have visited one of the areas particularly affected by the epidemic within the previous 14 days.

An internal monitoring unit has been set up at Group level and in each country, where our medical departments are in close contact with the health authorities.

In France, within the framework of a protocol signed with the French National Public Health Agency in 2018, the Korian Group's nursing homes are part of a sentinel network and, as such, collaborate with national reference centres for the diagnosis and prevention of acute respiratory infections.
